Docker Hub: https://hub.docker.com/u/minddecoders

PROFESSIONAL SUMMARY

Computer Science graduate with hands-on experience designing, building, and deploying cloud infrastructure and DevOps automation projects using Amazon Web Services (AWS), Terraform, Docker, Linux, and GitHub Actions.

Experienced in Infrastructure as Code (IaC), CI/CD pipeline automation, containerization, AWS infrastructure provisioning, and secure cloud authentication using OpenID Connect (OIDC). Independently developed projects involving EC2 Auto Scaling, Application Load Balancers, Amazon ECS Fargate, Amazon ECR, RDS, infrastructure monitoring, and automated deployment workflows.

Strong interest in cloud infrastructure, deployment automation, scalability, and infrastructure optimization. Seeking a Junior Cloud Engineer, Junior DevOps Engineer, or Cloud/DevOps Internship opportunity to apply practical skills and contribute to real-world engineering projects.

EDUCATION

Bachelor of Science in Computer Science (BSCS)
Hazara University, Mansehra, Pakistan October 2022 – June 2026 **CGPA:** 3.82 / 4.00

TECHNICAL SKILLS

Cloud Computing – Amazon Web Services (AWS): EC2, Auto Scaling, VPC, IAM, OIDC, S3, ECS, Fargate, ECR, ALB, RDS, Secrets Manager, KMS, CloudWatch.

DevOps & Infrastructure Automation: Terraform, Infrastructure as Code, Modules, Workspaces, GitHub Actions, CI/CD, GitOps, Docker, Blue-Green Deployments.

Operating Systems & Networking Linux Administration, Bash, IP Addressing, Subnetting, DNS, SSH, HTTP/HTTPS, Routing, Troubleshooting.

Version Control: Git, GitHub.

TECHNICAL PROJECTS

1. AWS EC2 Auto Scaling & DevOps Automation Project

Technologies: AWS EC2, Auto Scaling, VPC, ALB, Terraform, Docker, Amazon ECR, GitHub Actions, CloudWatch, Linux.

- Designed and deployed scalable AWS infrastructure using a custom VPC with public and private subnets.
- Provisioned AWS resources using modular Terraform configurations, variables, outputs, and S3 remote state.
- Configured an Application Load Balancer, target groups, and health checks to distribute incoming application traffic.
- Implemented an EC2 Auto Scaling Group to manage application instances and support scalability.
- Containerized the application using Docker and integrated Amazon ECR for container image management.
- Developed GitHub Actions CI/CD workflows to automate application builds and deployment.
- Configured secure AWS access using IAM roles and GitHub Actions authentication.
- Implemented CloudWatch metrics, alarms, and a custom monitoring dashboard to monitor infrastructure health and application performance.
- Practiced infrastructure troubleshooting, cost awareness, and responsible AWS resource management.

Project Status: Completed and independently implemented.
GitHub: https://github.com/minddecoders/aws-ec2-autoscaling-devops

2. AWS Fargate Full-Stack Flower App

Technologies: AWS ECS Fargate, Docker, Terraform, GitHub Actions, React, Vite, Node.js, Express, RDS MySQL, ALB, CloudWatch.

- Designed and deployed a full-stack application using Amazon ECS Fargate.
- Provisioned cloud infrastructure using Terraform.
- Configured an Application Load Balancer to route application traffic.
- Integrated Amazon RDS MySQL for database persistence.
- Implemented GitHub Actions CI/CD workflows for automated deployment.
- Configured secure AWS authentication using GitHub Actions OIDC.
- Practiced secrets management using AWS Secrets Manager, KMS, and Parameter Store.
- Configured CloudWatch logging and private database networking.

Project Status: Completed.

GitHub: https://github.com/minddecoders/aws-fargate-fullstack-flower-app

3. React Blue-Green Production Pipeline

Technologies: AWS, Terraform, GitHub Actions, React, CI/CD.

- Designed a blue-green deployment pipeline to practice controlled application releases with minimal downtime.
- Provisioned AWS infrastructure using Terraform.
- Developed GitHub Actions workflows for automated deployment.
- Implemented OIDC authentication between GitHub Actions and AWS.
- Configured deployment approval steps and rollback workflows.
- Practiced controlled production releases and deployment automation.

Project Status: Completed.

GitHub: https://github.com/minddecoders/react-blue-green-production-pipeline

4. React Cloud Deployment Multi-Environment Pipeline

Technologies: AWS, Terraform, Amazon S3, GitHub Actions, React.

- Designed a multi-environment cloud deployment pipeline.
- Used Terraform workspaces and environment-specific configurations.
- Configured Amazon S3 remote state for Terraform.
- Developed GitHub Actions workflows for infrastructure and deployment automation.
- Integrated secure AWS authentication using OIDC.

Project Status: Completed.

GitHub: https://github.com/minddecoders/react-clouddeploye-enterprise-pipeline

PRACTICAL EXPERIENCE

Independent Cloud & DevOps Projects

Self-Directed Learning and Implementation

Islamabad, Pakistan | July 2026 – Present

- Built and deployed independent AWS infrastructure projects using Terraform.
- Practiced Linux system administration, Bash scripting, and networking fundamentals.
- Developed CI/CD pipelines using GitHub Actions.
- Implemented secure AWS authentication through OpenID Connect (OIDC).
- Containerized applications using Docker and managed images using Amazon ECR and Docker Hub.
- Practiced AWS deployment architectures using EC2 Auto Scaling and ECS Fargate.
- Implemented infrastructure monitoring using CloudWatch metrics, alarms, and dashboards.
- Practiced infrastructure troubleshooting, deployment automation, and cost optimization.

CERTIFICATIONS & TRAINING

Professional Certifications: None completed yet.

Current Technical Learning: AWS Cloud Infrastructure and Services · Terraform and Infrastructure as Code · Docker and Containerization · GitHub Actions and CI/CD Automation · Linux Administration and Networking
